

FIT4FOOD2030 introduces the

Sustainable Food Systems Network

The way forward...

Raymond Gemen

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 774088

How do we carry this forward?

The image shows a screenshot of a social media group page for the 'Sustainable Food Systems Network'. The header is orange and features the hashtag #FOOD2030EU, a circular logo with 'FIT4 FOOD 2030' and 'NUTRITION', 'CLIMATE', 'INNOVATION', and 'CIRCULARITY', and several icons including a fork and knife, a group of people, a computer monitor, and a magnifying glass over a book. Below the header, there are navigation tabs for 'Feed', 'Members', 'Events', and 'Resources'. A secondary navigation bar includes 'Discussion', 'Poll', 'Event', 'Opportunity', and '+ More'. A text input field with the placeholder 'Write something...' and the 'eufte' logo is present. Below this, a 'Group Members' section shows 632 members and a 'View all members' link, followed by a row of five member profile pictures and a plus sign icon.

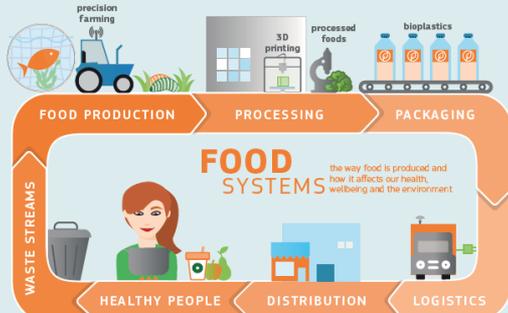

European Commission

EUROPEAN RESEARCH & INNOVATION FOR FOOD & NUTRITION SECURITY

More needs to be invested in research and innovation (R&I) to find solutions to the challenges facing our food systems, such as: hunger, malnutrition, obesity, climate change, sustainability, scarce resources, waste

R&I for future-proofing food systems

EU Investments in R&I to shape tomorrow's sustainable food systems by focusing on four key areas

GET INVOLVED IN THE DEBATE

#FOOD2030EU

Research and Innovation

CULTIVATING BREAKTHROUGHS FOR A HEALTHIER AND MORE SUSTAINABLE FOOD SYSTEM

THREE POLICY RECOMMENDATIONS FOR RESEARCH AND INNOVATION

Food system transformation requires strong research and innovation (R&I) breakthroughs that have the potential to change the entire food system chain, as well as environmental production and climate change. Policy R&I breakthroughs and regional interventions, breakthroughs

FIT4FOOD2030 funding systems for R&I policy across research institutions

2 Responsible research and innovation

1 Inclusion thinking on the R&I

A research agenda that takes into account the needs of start-ups and grassroots actors, the development of more R&I projects, future-proofing the food system, and the analysis of the R&I system to identify drivers and barriers for breakthroughs are key.

FIT4FOOD2030 supports the European Commission in implementing its FOOD2030 policy framework. The consortium is a unique international collaboration between key stakeholder organisations and networks; partnerships for R&I, experts in stakeholder engagement, (public/private) research and innovation, and communication.

The research underpinning these recommendations is published in a FIT4FOOD2030 publication entitled '... for future-proofing the food system'.
